FOR IMMEDIATE RELEASE

ARC launches mobile-friendly Codes of Practice

The Australian Refrigeration Council (ARC) is pleased to announce that the stationary Australia and New Zealand Refrigerant Handling Codes of Practice 2025 edition are now fully digital.

With this upgrade, technicians can now access the Codes directly from their mobile devices. The HTML versions include a dynamic search function and quick navigation tools, making it easier for technicians to locate the information they need.

Earlier this year, AIRAH, the ARC and the Department of Climate Change, Energy, the Environment and Water facilitated an update of the Codes, following considerable public consultation and assistance from a review committee. The upgrade to a responsive online format supports ARC's commitment to innovation, improved information access, and streamlined communication.

ARC CEO Glenn Evans said the digital release will provide elevated access and ease of use for technicians. 'Digitalisation modernises the way information is accessed and shared. Our goal with digitalising these Codes is simple – to make it easier for technicians to find the information they need – anytime, anywhere,' he said.
